 <p>The Ultimate Fat Burning <b>hCG Diet</b></p> <p><b>NATURAL PLAN</b> (10 weeks / 12 to complete)</p> <p><b>Week One to Week 10</b> Initial Paperwork Consultation Lab Work Planned Menu B-12 Injection (2 times/week) or B-12 pills Aqua Free (1 week's supply) Crave Away (1 week's supply)</p> <p>Vitals (every visit) Weigh-in (once a week) Measurements (once every 2 weeks) Counseling (as often as needed)</p> <p>Price: \$400.00 Deposit \$150.00 \$50 payments (Weeks 2 -6) Discount price: \$360.00 (When paid in full)</p>	<h3>Medications</h3> <p><b>(HCG) - Human Chorionic Gonadotropin</b>, a hormone naturally produced in the body, is believed to break down your abnormal fat, causing you to lose inches. At the same time, it protects your body's good fat (endogenous) and muscle from depleting. This means that you can go on a low calorie food plan and lose weight without the typical problems such as muscle loss, sagging skin, and always feeling hungry.</p> <p><b>(HCG) WILL HELP YOU TARGET:</b></p> <ul style="list-style-type: none"><li>■ Problem areas in women, which generally include the hips, thighs, buttocks waist, stomach, and behind the upper arms.</li><li>■ Problem areas in men, which generally include the upper chest, back, neck, waist and stomach</li></ul> <p>HCG signals the brain to allow your "Secured Fat Reserves" to be used as a source of energy when combined with our low calorie diet (900 - 1200 cal.).</p>  <p><b>Phentermine</b> was first introduced to the United States as a new kind of weight loss drug. Throughout the decades, Phentermine has continued to be one of the most popular weight-loss drugs available today.</p> <p>Phentermine HCL, the drug that is prescribed today, controls appetite by working on the central nervous system of the user, namely by stimulating the hypothalamus to produce neurotransmitters. These neurotransmitters affect the way the brain receives signals of hunger as well as signals of being full.</p> <p>In combination with HCG, the results are phenomenal!</p>
